Title and author

## Condensate testing of the PE pipe grade P502YE from Korea Petrochemical Ind.

Mattias Svedberg

Abstract

### Introduction

The aim of this work was to evaluate, according to Annex B in ISO 4437, the PE 80 pipe grade P502YE's resistance to gas constituents (condensate testing). The internal pipe code at Bodycote is 3684, see Appendix A for details.

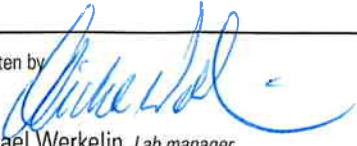

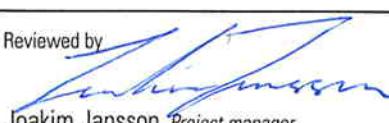

### Procedure

The dimensions of the pipe specimens were first measured. The pipe specimens were then conditioned in air for 1 500 h at 23±2°C. The conditioning medium was a synthetic mixture of 50% (m/m) n-decane (99%) and 50% (m/m) 1-3-5- trimethylbenzene. After the conditioning the pipes were subjected to a hydrostatic pressure of 2.0 MPa at 80°C. To pass the test the pipes must withstand >20 h of hydrostatic pressure testing.

### Results

As all five pipes were still ongoing after >20 h of testing at 2.0 MPa and 80°C, the PE 80 pipe grade P502YE passed the resistance to gas constituents test stated in ISO 4437.

The results are shown in detail in Appendix B.

**Client info**

---

Client: Korea Petrochemical Ind. Co., Ltd.

Street address: 178 Bukok-Dong, Nam-Ku,

Postal code: Ulsan, Metropolitan City

Country: South Korea

Contact person: Mr. Boohui Yoon

Phone: +82-52-278-8623

E-mail: cerestin@kpic.co.kr

Web: <http://www.kpic.co.kr>

2007-07-25

**Material info**

---

Bodycote code:	3684
Trade name:	P502YE
Material:	PE
Colour:	Yellow
Nominal dimension:	32 x 3 mm
Arrival date at Bodycote:	2006-01-10
Amount:	124 x 1.2 m
Consignor:	KPIC
Marking:	No marking
Resin producer (date, batch no.):	KPIC
Pipe producer (date, lot no.):	KPIC

**Test info**

---

Test laboratory:	Bodycote Polymer
Responsible:	Björn Carlsson
Test method:	ISO 1167:2006, ISO 4437
Length (total/free):	350/310 mm
Fittings:	Brass fittings, type A unless otherwise remarked
Internal medium:	50% (m/m) n-decane (99%) and 50% (m/m) 1-3-5-trimethylbenzene
External medium:	Water
Conditioning time:	1 500 h
Situation on:	2007-07-19

**Table remarks**

---

Code	Internal Bodycote code
T	Test temperature
Start date	Beginning of test
Reg date	Registration date for failure/termination of the pipe specimen
$e_{min}$	Minimum wall thickness
$d_{em}$	Mean outside diameter
p	Internal pressure
$\sigma$	Circumferential stress (hoop stress)
->	The pipe is under test

2007-07-25

**Pipe remarks**

---

- 1 The pipe was terminated as it had reached the required time of 20 h

2007-07-25

**Hydrostatic pressure testing**
